EDUCATION & CERTIFICATIONS

Abu Dhabi University – Software Engineering BSc **June 2024**
AWS Certified Cloud Practitioner **August 2024**
AWS Solutions Architect Associate **Oct 2024**
Cisco Cybersecurity Essentials **November 2023**

TECHNICAL SKILLS

Java ● JavaScript ● React ● AWS ● Next.js● Dart ● Flutter ● PostgreSQL ● Python ● RDBMS ● Node.js ● Supabase Django ● REST APIS ● Typescript ● MongoDB ● TensorFlow ● Playwright● Postman ● Git ● Auth(JWT/OAuth 2.0) ● Pinecone ● Salesforce API ● N8N ● AWS Bedrock● Microsoft Graph ● CloudFront ● DynamoDB ● GitLab CI/CD ● Microsoft Entra ID

WORK EXPERIENCE

Abu Dhabi University

Software Engineer – Technical Project Lead (Full-Time) **January 2025 - Current**

- Act as **technical project lead** for internal software initiatives, leading **stakeholder requirements** meetings, **defining solution** and database architecture, preparing **BRDs** and **Scopes of Work**, and managing development tasks, **dependencies**, and **delivery timelines**.
- Built a faculty document management system with **real-time employee data sync** and automated SharePoint folder structure creation; developed a front-end application enabling document uploads with automatic database storage and backup, **reducing manual processing by 30%** and establishing a dual-storage backup system.
- Built an automated lead sync pipeline using the **LinkedIn Lead Sync API** with 30-minute CRON jobs, **DynamoDB deduplication, and UTM tracking**, eliminating manual imports and improving conversion rates.
- Architected a document ingestion pipeline through chunking/embeddings to vector indexing, delivering **RAG chatbot responses** with **robust handling of malformed inputs**, significantly reducing instructor support burden.
- Migrated the AI chat platform to **AWS Bedrock** behind a multi-provider abstraction layer (Bedrock/OpenAI failover) with **prompt caching and a dual-layer cost-governance ledger**, cutting LLM token costs and enforcing fail-closed budget caps.
- Developed webhook-based PDF parsing with **LLM-driven scoring and feedback** returned synchronously to the front end, digitizing and **automating organizational hiring processes** and streamlining first-pass candidate screening.
- **Architected two separate payment gateways** with enterprise-grade security protocols, creating the organization's first online payment capability for military personnel.
- Introduced automated testing frameworks and security audit tools into the development lifecycle, including a **role-based authorization system** (4 tiers, 30+ permissions) enforced via API checks and PostgreSQL Row-Level Security, backed by forensic audit logging and a **90+ test automated security suite integrated into GitLab CI/CD**; proactively **identified and patched multiple vulnerabilities**, substantially reducing overall system risk exposure.

Nasr Esports

AI Automation Engineer (Contract) **October 2024 – January 2025**

- Integrated **AI/ML pipelines into API endpoints** to automate decision-making across two concurrent esports projects.
- Developed **automation workflows that streamlined recurring business operations** and reporting.

PROJECTS & RELEVANT EXPERIENCE

MemorEyez | React.js, Node.js, Flutter, Dart, Unity, C#, Flask, PostgreSQL **September 2023 – June 2024**

- Built **VR cognitive-exercise** experiences in Unity using **KNN** and **SVM** machine-learning models to predict patient mental-state outcomes.
- Collaborated with neurologists from **Cleveland Clinic** to validate the system against medical best practices, delivering cross-platform Flutter apps for patient monitoring and caregiver support.
- Deployed the application on AWS using **native AWS services** such as **S3, CloudFront, Route 53,** and **AWS WAF**
